DS DATAMATION SYSTEMS INC

Universal 16-port USB Charging

For the first time anywhere, there is a universal USB charging device that adjusts each port to the optimal charging profile for each device as it is plugged into the hub.

It will charge iPads, iPods, iPhones, mobile phones, Kindles, Nooks and other eReaders, tablets and virtually any device that standalone charges with USB.

This advanced, professional hub is also *future-proof*: its firmware can be updated with new charging profiles as new USB devices are introduced. This helps preserve the battery life of your devices and assures you that you can accommodate any device that is made for USB standalone charging (without a host).

It is perfect for convenience charging, tech centers, service depots, trade shows and institutional users.

Model #DS-C-U16

- Compact, durable, easy-to-use form factor

- Use on a desk or counter or with an optional carrying case

- Custom steel and brushed anodized aluminum enclosure houses state-of-the-art 16-port USB board powered by Cambrionix, the most respected leader in USB charge & sync technologies
